

PORTABLE LPG SHOWER TRAILERS

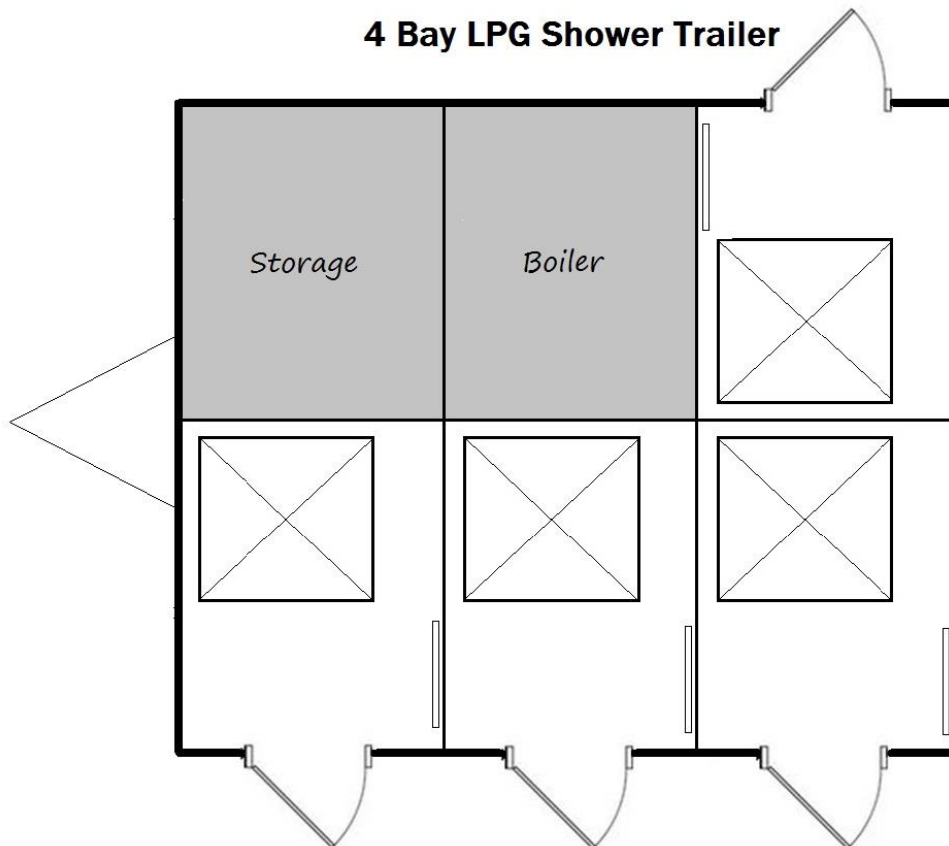

Standard Shower Trailer

Our standard units consist of four separate shower cubicles all accessed via their own door from outside. Each of the individual showers is unisex.

These units have an LPG boiler for heating the water. They require a reasonable water supply, provision for the waste water and an electrical connection for the interior lighting.

Please see [Connection of Power & Water Factsheet](#) for more details.

4 Bay LPG Shower Trailer

Please note -

All units are set up and tested at the time of delivery so please ensure that the water connection and power supply are available at that time. We cannot take any responsibility for the malfunction of shower units due to poor water pressure or contaminated supply.

If you're not sure about any of the above please give us a call on 01597 811 177 for friendly & helpful advice.
